Updated Instructions for Oil Cooler Coolant Hose attachment:

Note: The inlet hose for the HT_CP-406 cab heater connects directly to the oil cooler on your RZR 1000. These instructions will replace the sections referring to “Figure 9”, and greatly simplify the installation of the ‘Y’ Fitting.

1. Figure 9, shows several components that attach to a plastic Y. We designed an aluminum Y that combines all of the components shown in Figure 9. Use the custom Aluminum Y to tie into the Oil Cooler lines as described in the instructions. Use #8 hose clamps to attach to the smaller ends (1/2”) of the Aluminum Y that directly attach to the Oil Cooler hose. Use a #10 hose clamp included in your kit to attach the 5/8” Heater Hose included in your kit.
